

Data Engineer

Location:

Irving, Texas (and/or various client sites across the United States)

Travel/Relocation:

Must be willing to travel and/or relocate as required.

About the Role:

We are seeking a highly skilled Senior Data Engineer to work in an agile environment and collaborate with business users to design, develop, test, and implement modern data engineering and analytics solutions. You will build scalable data platforms and real-time data pipelines that enable business intelligence and data-driven decision making.

Key Responsibilities:

- Implement data migration and data engineering solutions using Azure
- Databricks, Azure Data Factory, and Azure Data Lake Storage.
- Develop Azure Data Factory pipelines to orchestrate enterprise ETL jobs.
- Design and develop complex Databricks jobs using PySpark and Spark SQL.
- Develop, implement, and maintain large-scale business intelligence (BI) and data visualization solutions using Tableau and PowerBI.
- Analyze source system data to assess transformation logic and data quality through data profiling.
- Identify opportunities to improve data reliability, efficiency, and overall data quality.

You're a Great Fit If You Are...

- Experienced in modern cloud-based data engineering platforms
- Proficient in Azure Databricks, Azure Data Factory, and Azure Data Lake
- Strong in PySpark, Spark SQL, and ETL pipeline development
- Knowledgeable in BI tools such as Tableau and PowerBI
- Passionate about building scalable, high-performance data platforms
