

Senior Software QA Engineer

Location:

Irving, Texas (and/or various client sites across the United States)

Travel/Relocation:

Must be willing to travel and/or relocate as required.

About the Role:

We are seeking a highly skilled Senior Java Developer responsible for end-to-end development of enterprise applications. You will work across all phases of the Software Development Life Cycle (SDLC) in an Agile environment, delivering scalable, secure, and high-performance solutions.

Key Responsibilities:

- Analyze business user needs and translate them into effective test strategies and automation solutions.
- Design, develop, and maintain scalable test automation frameworks in an Agile Scrum environment.
- Develop comprehensive test strategies, test plans, and test cases to identify software defects and root causes.
- Perform software automation testing using **Java, Selenium, SoapUI, Rest Assured, and SQL**.
- Implement Test Automation Framework using **Selenium WebDriver and TestNG** under the Java platform utilizing industry-standard design patterns.
- Test REST and SOAP web services using **SoapUI**.
- Perform API testing using **Rest Assured**.
- Create Automation Regression suites and configure **Jenkins** for nightly build execution.
- Document test results, test procedures, and test cases in **Confluence** after every release.
- Write SQL queries to validate data integrity across database tables.

You're a Great Fit If You Are...

- Experienced in enterprise Java application development and Microservices architecture.
 - Proficient in Java, Spring Boot, REST APIs, Angular, and modern web technologies.
 - Knowledgeable in DevOps tools, CI/CD pipelines, and cloud deployments.
 - Strong in database development and performance optimization.
 - Passionate about delivering high-quality, scalable software solutions.
